

## **Indoor and Outdoor LED Lights – A Case study**

Indoor and outdoor LED lights serve different purposes based on their environments yet saving huge amounts of energy. Indoor lighting focuses on comfort, ambiance, and energy efficiency, commonly used in homes and offices. Outdoor lighting is designed for durability and brightness, ideal for security, pathways, and open areas. Both types use LED technology for better efficiency and longer life. Choosing the right type ensures effective illumination and cost savings.

Aashaya Group of companies has designed over 25 different outdoor LED boards, widely used in applications such as street lighting, petrol stations, parks, playgrounds, large office spaces, mezzanine floors of hotels, and other public spaces. In addition, the company has developed more than 15 indoor LED boards tailored for household and commercial use. Some of the examples are shown below
